# Alpha-numeric Code :

→ It is special type of code which represent all alphanumeric data (i.e. letters, symbols and numbers).

eg. The Telegraph which use Morse code in 1's and 0's is the example of Alphanumeric code.

→

```
              |
    ┌─────────┴─────────────┐
```

ASCII Code   ISCII Code

→ It is American Standard code for Information Interchange. It consist of '7' bits for all alphanumeric data in Computer I/P /O/P systems.

→ eighth bit is added for parity

→ when key is pressed on keyboard, It is converted into ASCII Code and then Computer starts Processing. After that ASCII code is converted its Standard Language for display on monitor.

ISCII Code ⇒ It is 8-bit code, whose Lower 7-bits, 128 characters are same as ASCII code and other 123 character are for ten Indian script based on the ancient Brahmi Scripts.
